

The diagram illustrates a sequence of data arrival rates over time. The vertical axis is labeled 'Time' and the horizontal axis is labeled 'Data Arrival Rate'. The sequence consists of 11 horizontal bars, each representing a data arrival rate at a specific time. The bars vary in their starting and ending positions along the horizontal axis, indicating different arrival rates. The bars are arranged in a way that suggests a pattern of arrival rates over time, with some bars being longer than others, indicating higher arrival rates at certain points.
